A book for Indian designers and brand marketers. Aesthetics in Marketing primarily deals with understanding aesthetics beyond its visual association and making it relevant to product designing strategies. It is the first attempt of its kind to understand the influence of aesthetics in the context of two very important sectors of the industry—consumer durables and automobile. The book analyses various aesthetic attributes, qualities and elements in a product and deliberates on the important of each of these and the kind of balance necessary among them for designing successful products. It stands out on account of the theory, concepts and models discussed, which have a strong foundation in the authors' primary research. Through real-life case studies, interviews, and company and consumer surveys, the authors have brought to the fore the important of aesthetics in various aspects of marketing, like cultivation of a brand image, and have focused on the role played by demographic variables in influencing product buying decisions. Bringing a whole new meaning to the adage `beauty is in the eye of the beholder`, this book will certainly lead to introspection on the importance of `aesthetics` in the market value of a product.

This book presents theories and case studies for corporations in developed nations, including Japan, for designing strategies to maximize opportunities and minimize threats in business expansion into developing nations. The case studies featured here focus on Asia, including China and India, and use examples of Japanese manufacturers. Five case studies are provided, including Hitachi Construction Machinery and Shiseido in China and Maruti Suzuki in India. These cases facilitate the reader's understanding of the business environments in emerging economies. This volume is especially recommended for business people responsible for international business development, particularly in China and India. In addition, the book serves as a useful resource for students in graduate-level courses in international management.

This 1999 edition of OECD's periodic review of Hungary's economy examines recent economic developments, policies and prospects. It includes special features on structural reform and on the health care system.

Volume One traces the history of Opel and Vauxhall separately from inception through to the 1970s and thereafter collectively to 2015. Special attention is devoted to examining innovative engineering features and the role Opel has taken of providing global platforms for GM. Each model is examined individually and supplemented by exhaustive supporting specification tables. The fascinating history of Saab and Lotus begins with their humble beginnings and examines each model in detail and looks at why these unusual marques came under the GM Banner. Included is a penetrating review of Saab through to its unfortunate demise. Volume Two examines unique models and variations of Chevrolet and Buick manufactured in the Southern Hemisphere and Asia but never offered in North America. Daewoo, Wuling and Baojun are other Asian brands covered in detail. This volume concludes with recording the remarkable early success of Holden and its continued independence through to today. Volume Three covers the smaller assembly operations around the world and the evolution of GM's export operations. A brief history of Isuzu, Subaru and Suzuki looks at the three minority interests GM held in Asia. The GM North American model specifications are the most comprehensive to be found in a single book. Global and regional sales statistics are included. GM executives and management from around the globe are listed with the roles they held. An index ensures that these volumes serve as the ideal reference source on GM.

How to reduce carbon emissions and save over \$15,000 in energy costs over five years.
