The three effective sales ability qualities are: First, the ability to be effective in communicating with customers. The Second, is the ability to listen- to allow customers acknowledge feelings of care, essential for encouraging trust and loyalty to doing business. The structuring of a sales process that benefits a salesperson, his organization, and the customers can be achieved by effective listening. The third effective sales quality is the ability to

understand customers. Effective salespeople use their communication and listening skills to understand their customers. It is a very important strategy that helps control customers. The strategies I used to sell volumes of products were not magical; they were, instead, my utmost desire to maximize my income as the primary benefit for being a professional salesperson. Understanding customers makes the difference. I believe that what I did to achieve sales benefits can be done by anyone who makes good efforts to try to become the best they can be in sales business. How the author wants the reader to understand the three sales abilities: Communication. Every communications must concentrate on matters involving product sales and purchases. Listening. Listening should involve giving attention to customers' verbal and non-verbal cues as relates to their purchasing needs. Understanding. Understanding is the key to knowing how to successfully respond to customers' needs. These are the essential sales principles the author followed to achieve sales business success and growth. The author acknowledges sales career as a profession with a desire to achieve financial success. The same desire was his motivation towards his hard works for success. This is why he believes that anyone with such a burning desire for success as he had, can also achieve sales success.

The light-duty vehicle fleet is expected to

undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction

technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
