Whilst accounting for the present-day popularity and relevance of Alan Watts ' contributions to psychology, religion, arts, and humanities, this interdisciplinary collection grapples with the ongoing criticisms which surround Watts ' life and work. Offering rich examination of as yet underexplored aspects of Watts ' influence in 1960s counterculture, this volume offers unique application of Watts ' thinking to contemporary issues and critically engages with controversies surrounding the commodification of Watts ' ideas, his alleged misreading of Biblical texts, and his apparent distortion of Asian religions and spirituality. Featuring a broad range of international contributors and bringing Watts ' ideas squarely into the contemporary context, the text provides a comprehensive, yet nuanced exploration of Watts ' thinking on psychotherapy, Buddhism, language, music, and sexuality. This text will benefit researchers, doctoral students, and academics in the fields of psychotherapy, phenomenology, and the philosophy of psychology more broadly. Those interested in Jungian psychotherapy, spirituality, and the self and social identity will also enjoy this volume.

This book is about HCI research in an industrial research setting. It is based on the experiences of two researchers at the IBM T. J. Watson Research Center. Over the last two decades, Drs. John and Clare-Marie Karat have conducted HCI research to create innovative usable technology for users across a variety of domains. We begin the book by introducing the reader to the context of industrial research as well as a set of common themes or guidelines to consider in conducting HCI research in practice. Then case study examples of HCI approaches to the design and evaluation of usable solutions for people are presented and discussed in three domain areas: - item Conversational speech technologies, - item Personalization in eCommerce, and - item Security and privacy policy management technologies In each of the case studies, the authors illustrate and discuss examples of HCI approaches to design and evaluation that worked well and those that did not. They discuss what was learned over time about different HCI methods in practice, and changes that were made to the HCI tools used over time. The Karats discuss trade-offs and issues related to time, resources, and money and the value derived from different HCI methods in practice. These decisions are ones that need to be made regularly in the industrial sector. Similarities and differences with the types of decisions made in this regard in academia will be discussed. The authors then use the context of the three case studies in the three research domains to draw insights and conclusions about the themes that were introduced in the beginning of the book. The Karats conclude with their perspective about the future of HCI industrial research. Table of Contents: Introduction: Themes and Structure of the Book / Case Study 1: Conversational Speech Technologies: Automatic Speech Recognition (ASR) / Case Study 2: Personalization in eCommerce / Case Study 3: Security and Privacy Policy Management Technologies / Insights and Conclusions / The Future of Industrial HCI Research
