This volume is the most comprehensive reference work to date on Lexical Functional Grammar. The authors provide detailed and extensive coverage of the analysis of syntax, semantics, morphology, prosody, and information structure, and how these aspects

of linguistic structure interact in the nontransformational framework of LFG. The book is divided into three parts. The first part examines the syntactic theory and formal architecture of LFG, with detailed explanations and comprehensive illustration, providing an unparalleled

introduction to the fundamentals of the theory. Part two explores non-syntactic levels of linguistic structure, including the syntax-semantics interface and semantic representation, argument structure, information structure, prosodic structure, and morphological structure, and how these are

related in the projection
architecture of LFG.

Chapters in the third
part illustrate the theory
more explicitly by
presenting explorations
of the syntax and
semantics of a range of
representative linguistic
phenomena:

modification, anaphora,
control, coordination,
and long-distance
dependencies. The final

This user's manual provides the necessary guidance, complete with multiple example applications which include model input and output, for using the N-line numerical model. Capabilities of the model include the simulation of a) single or multiple shore-

breakwaters, and c)
disposal of material or
dredging of material in
the coastal zone. Model
parameters are
discussed in order to
guide the potential user
to a successful
application of the
model. The N-line
model is versatile, easy

report MR 83-10, should be obtained by any potential user of the model. The N-line model is useful in showing qualitative trends for a complex case such as Lakeview Park, Lorain, Ohio. Some of the drawbacks of the program when modeling Lakeview Park, such as the inability reach an

equilibrium shoreline, and the low sinuosity of the shoreline when influenced by breakwater segments, could possibly be successfully modeled by modifying the different input parameters, such as the ADEAN parameter and/or initial shoreline location and/or the model code.

Perhaps then a
