Issues spawned by the headlong pace of developments in science and technology fill the courts. The realm of the law is sometimes at a loss--constrained by its own assumptions and practices, Jasanoff suggests. This book exposes American law's long-standing involvement in constructing, propagating, and perpetuating myths about science and technology.

experience leaks, flooding, or other forms of excessive indoor dampness at some point. Not only is excessive dampness a health problem by itself, it also contributes to several other potentially problematic types of situations. Molds and other microbial agents favor damp indoor environments, and excess moisture may initiate the release of chemical emissions from damaged building materials and furnishings. This new book from the Institute of Medicine examines the health impact of exposures resulting from damp indoor environments and offers recommendations for public health interventions. *Damp Indoor Spaces and Health* covers a broad range of topics. The book not only examines the relationship between damp or moldy indoor environments and adverse health outcomes but also discusses how and where buildings get wet, how dampness influences microbial growth and chemical emissions, ways to

prevent and remediate dampness, and elements of a public health response to the issues. A comprehensive literature review finds sufficient evidence of an association between damp indoor environments and some upper respiratory tract symptoms, coughing, wheezing, and asthma symptoms in sensitized persons. This important book will be of interest to a wide-ranging audience of science, health, engineering, and building professionals, government officials, and members of the public.

Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal”

human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb's effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta's family did not learn of her "immortality" until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark

history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta’s daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn’t her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.

Discussing the profound changes and possibilities for writing and writing instruction that are evident at this stage of the computer revolution, this book contains 17 articles which focus on implications for teaching, learning, and teacher education and highlight questions that teachers and researchers must address to realize the potential of the new technology. The book's four main sections deal with the profound influence of the new electronic age on teachers' lives, the ways computers change the responsibilities of students and teachers, the significance of hypertext for writers and teachers, and the political implications of the computer revolution for education. The articles and their authors are as follows:

Eugene W. Holland provides an excellent introduction to Gilles Deleuze and Felix Guattari's *Anti-Oedipus* which is widely recognized as one of the most influential texts in philosophy to have appeared in the last thirty years. He lucidly presents the theoretical concerns behind *Anti-Oedipus* and explores with clarity the diverse influences of Marx, Freud, Nietzsche and Kant on the development of Deleuze & Guattari's thinking. He also examines the wider implications of their work in revitalizing Marxism, environmentalism, feminism and cultural studies.

This study places the last three novels of Hugo's maturity - *Les Travailleurs de la mer* (1866), *L'Homme qui rit* (1869), and *Quatrevingt-Treize* (1874) - within the context of his artistic development after the success of *Les Misérables* (1862), thereby illuminating the shift from a poetics of harmony to one of transcendence.

Ford's *The Man Who Shot Liberty Valance* and *The Searchers*. Robert Pippin treats these films as sophisticated mythic accounts of a key moment in American history: its "second founding," or the western expansion. His central question concerns how these films explore classical problems in political psychology, especially how the virtues of a commercial republic gained some hold on individuals at a time when the heroic and martial virtues were so important. Westerns, Pippin shows, raise central questions about the difference between private violence and revenge and the state's claim to a legitimate monopoly on violence, and they show how these claims come to be experienced and accepted or rejected. Pippin's account of the best Hollywood Westerns brings this genre into the center of the tradition of political thought, and his readings raise questions about political psychology and the political
