Established in 1992 and recognised across Europe and worldwide, the EU Ecolabel is a label of environmental excellence that is awarded to products and services meeting high environmental standards throughout their life-cycle: from raw material extraction, to production, distribution and disposal. The EU Ecolabel promotes the circular economy by encouraging producers to generate less waste and CO2 during the manufacturing process.

By bringing together representatives of the Commission and Protected Areas professionals on an annual basis, The EUROPARC Federation aims to highlight the contribution of Protected Areas in implementing key European policies, raise awareness of managers about EU policy developments and provide the European Commission with clear insights about the challenges faced by professionals in the field.

This book offers a deep insight into the genesis and development of the European Commission's energy and climate legislation, focusing on the interplay of politics and science. How does the Commission react when confronted with knowledge? According to the author, the Commission functions as catalyst transforming knowledge into politics.

The European Union (EU) has a hugely important effect on the way in which environmental policies are framed and implemented in many different parts of the world, but especially Europe. The new and comprehensively revised edition of this well-known textbook provides a state-of-the-art analysis of all the EU's environmental policies. Comprising five parts, it covers the rapidly changing context in which EU environmental policies are made, the key actors who interact to co-produce policy and the most salient dynamics of policy making, ranging from decision making through to implementation and evaluation. Written by leading experts in the field, individual chapters examine how the EU is responding to a multitude of different problems including biodiversity loss, climate change, energy insecurity, and water and air pollution. They tease out the many important ways in which the EU's policies on these topics co-evolve with national and international environmental policies. In this third edition a mixture of learning features are employed to ensure that undergraduate and postgraduate students fully understand how EU policies in this vital area developed in the past and how they are now adapting to the rapidly evolving challenges of the twenty-first century.

For conservation of plant resources to succeed, it is essential to understand their importance for local people and their livelihoods. This practical and accessible handbook shows how to do this for a non-technical readership. It describes the diverse pro

Climate policy is today a significant area of EU governance, providing important framework conditions for many industries. But how has EU climate policy developed? This book offers structured, comparative case studies of the development of four central climate policies: emissions trading systems, renewables, carbon capture and storage, and energy policy for buildings, examining the intriguing similarities and differences in how these have taken shape. Combining sociological New Institutionalism and political science theories in a novel and engaging way, Elin Lerum Boasson and J?rgen Wettestad explore and explain the history of EU climate policy. What emerges are fascinating stories - of skilled entrepreneurs who have managed to create and exploit political windows of opportunity, and of more long-term path-dependent developments. Drawing on more than 60 interviewees, the authors present accounts never told before, providing a valuable and timely contribution to our knowledge of environmental management and EU integration. This book is a must-read for all those seeking to understand the driving forces in EU climate policy and recognize its prospects for the future.

Seminar paper from the year 2005 in the subject Politics - International Politics - Region: Eastern Europe, grade: 1,0, University of Applied Sciences Bremen (Institute of International Relations and Political Sience), course: Governments and Politics in Lithuania, 69 entries in the bibliography, language: English, abstract: Environmental policy in Lithuania emerged after regaining independence in the beginning of the 1990s. The young democracy had to build up a completely new legal system and institutions. At the same time this policy field has already matured on the EU-level as well as in its member states. This paper focuses

on the adaptation of Lithuanian environmental policy to the requirements of the EU and employs the concept of Europeanisation to explain changes. Europeanisation, as the term is used in this paper, is concerned with the consequences of European integration for the member and applicant states and politics within them. It is found that especially through the accession process it was easy to 'export' EU rules and principles - firstly, because the pressure to adopt EU legislation was high and secondly, because local elites were ready to take EU templates. After an introduction to the topic the second chapter presents an overview over EU environmental policy, whereas the third chapter focuses on Lithuanian environmental policy and the adaptations through the EU accession process. Chapter four then employs the concept of Europeanisation to explain the impact of EU environmental policy on Lithuanian domestic policy-making and its institutions.

The ultimate goal of EU environmental policies is spelled out in the title and vision of EU's 7th Environment Action Programme (EAP): 'Living well, within the limits of our planet'. The Commission considers that this vision continues to be valid and fully in line with the UN Agenda 2030. However, in spite of the EU's ambitious policy action the achievement of the 7th EAP vision is greatly challenged. All indicators show that the Earth is facing an unprecedented ecological crisis and that many planetary boundaries have already been crossed: the economic and societal development witnessed over the past century has also caused unprecedented environmental degradation. In this context, three services of the European Commission (The Directorate General for the Environment - DG ENV, the Directorate General Joint Research Centre - JRC and the Directorate General for Research and Innovation - DG RTD) and the European Environment Agency joined their efforts to run an inclusive and participatory forward-looking process to support the reflection on the future of EU environmental policies. This process focussed on three priority themes: 1.Consumption and lifestyles 2.Sustainable food systems 3.Future of industry These three themes were addressed in a foresight approach through three dedicated one-day workshops and generated a number of common conclusions: - The need for a politically agreed 2050 vision. - The need to adopt a systems approach to policy making - The realisation of the important role of citizens - The need to help businesses adopt truly sustainable business models - The importance of ensuring transparency and traceability of products throughout their life cycle - The need to take an integrated approach to the environmental challenges industry is facing - The need for an integrated policy covering food safety, security and sustainability to ensure the sustainability of the EU food system. - The realisation that EU sustainability and global sustainability go hand in hand The insights gained through this foresight exercise are intended for use by DG ENV when refining the European Commission's vision for a future EU environment strategy and EU sustainability strategy. They will be shared with other Commission services and stakeholders in the preparation of the European Green Deal announced by the President-elect Ursula von der Leyen in her political guidelines for the next European Commission 2019-2024. These guidelines already mention several of the topics discussed during this foresight exercise.
