Life on Earth can be traced back over three billion years into the past. Many examples of the Earth's former inhabitants are to be found in rocks, preserved as beautiful and fascinating fossils. The earliest life forms were bacteria and algae; these produced the oxygen that enabled more complex life forms to develop. About 600 million years ago multi-cellular organisms appeared on Earth, some of which could protect themselves with hard

Olsen insists that neither body nor landscape are separate from our fundamental selves, but in a culture which views the body as a mechanism to be trained and the landscape as a resource to be exploited, we need to learn to see again their fundamental wholeness and interconnection. Through hard data, reflection, exercises, and inspiration, *Body and Earth* offers a guide to responsible stewardship of both our planet and our persons.
