An interest rate swap is a type of a derivative contract through which two counterparties agree to exchange one stream of future interest payments for another, based on a specified principal amount. In most cases, interest rate swaps include the exchange of a fixed interest rate for a floating rate

Interest Rate Swap - Learn How Interest Rate Swaps Work

An interest rate swap is a contract between two parties to exchange all future interest rate payments forthcoming from a bond or loan. It's between corporations, banks, or investors. Swaps are derivative contracts. The value of the swap is derived from the underlying value of the two streams of interest payments.

What Is an Interest Rate Swap and Why Would You Use It in ...

Interest rate swaps are the exchange of one set of cash flows for another. Because they trade over the counter (OTC), the contracts are between two or more parties according to their desired...

Interest Rate Swap Definition - investopedia.com

Interest rate swaps allow portfolio managers to adjust interest rate exposure and offset the risks posed by interest rate volatility. By increasing or decreasing interest rate exposure in various parts of the yield curve using swaps, managers can either ramp-up or neutralize their exposure to changes in the shape of the curve, and can also express views on credit spreads.

Understanding Interest Rate Swaps | PIMCO

In finance, an interest rate swap (IRS) is an interest rate derivative (IRD). It involves exchange of interest rates between two parties. In particular it is a "linear" IRD and one of the most liquid, benchmark products. It has associations with forward rate agreements (FRAs), and with zero coupon swaps (ZCSs).

Interest rate swap - Wikipedia

An interest rate swap is a financial derivative that companies use to exchange interest rate payments with each other. Swaps are useful when one company wants to receive a payment
