Eventually, deploying these containerized applications at a scale of thousands surpasses human ability. In this task, Kubernetes pods (a group of containers) help in open-source container orchestration. In the future, it is likely that Oracle Docker containers will run the microservices while Kubernetes will be used for container orchestration.

platform designed to run enterprise-class, cloud-enabled and web-scalable IT workloads. It is built upon the foundation laid by Google based on 15 years of experience in running containerized applications.

~~Kubernetes: An Overview - Linux.com~~

Kubernetes is not used to create the application containers; it actually needs a container platform to run, Docker being the most popular one. Kubernetes integrates with a large toolset built for and around containers and uses it in its own operations. Containers created with Docker or any of its alternatives can be managed, scaled and moved by Kubernetes, which also ensures failover management and health maintenance of
