This title was first published in 2002: Companies know that communication with their people is important. However, the road to incoherence is paved with good communications. Internal communication is often less than the sum of parts, because the parts do not fit together. This book looks at what a business needs from its people to succeed, what gets in the way, and the role of communication in helping to bridge the gap. It is designed to help companies link the components of their internal communication together for a more effective result. The text examines how businesses can use internal communication to achieve differentiation, to improve their quality, customer service, innovation and to manage change more effectively. It describes the why, the what and the how of internal communication - why business needs better communication to achieve its objectives, what internal communication needs to deliver to add value, and how organizations need to manage their communication for best results. The book provides a step-by-step approach for creating best practice.

Meadow takes us on a Cook's tour of communication technologies across time—the alphabet and moveable type printing, cave drawings and carrier pigeons, telephones, television and, of course, the Internet. In each case, Meadow shows how these (and other devices) are connected to each other, even as they serve to make connections between people. Part One discusses the basics of communications, while Part Two delves into telecommunications before the days of steam and electricity. Part Three offers insight into steam, electricity, and internal combustion energy and how they revolutionized society. Communication is the key to a productive world. For those dazzled by the pace of change in the technology or McLuhan's unorthodox but brilliant insights, Meadow's casual style and pace provide the perfect antidote.
