NETWORK  
THEORY(18EC32) -  
azdocuments.in

In mathematics, a  
Fourier series ( $f(x)$  or  $f(t)$ ,  $-i$  or  $/$ ) is a periodic  
function composed of  
harmonically related  
sinusoids, combined  
by a weighted  
summation. With  
appropriate weights,  
one cycle (or period)  
of the summation can

# Read Free Network Theory

be made to approximate an arbitrary function in that interval (or the entire function if it too is periodic). As such, the summation is a synthesis of another function.

Normally, in the  
context of the

Lebesgue integral,  
one would understand  
this to mean that

$\widehat{f}e^{2\pi i x} \in L^1$ , which is of

course the same as

$\widehat{f} \in L^1$ ,

and then the

statement becomes

just the usual Fourier
