gases found in ocean water that are necessary for living things are oxygen and carbon dioxide. The surface of the ocean absorbs energy from the sun and heats up. Because warm water is less dense than cold water, the warm water stays on the surface. Surface water is warmest near the equator and becomes colder as you travel away from the equator. Since cold water can hold more dissolved oxygen than warm water, there is more oxygen in polar waters

The dissolved salts in ocean water give it different properties from those of fresh water. Ocean water is more dense than fresh water. Because of its greater density, ocean water has more buoyancy than fresh water. This means that it lifts, or buoys up, less dense objects floating in it. Like temperatures on land, temperatures at the surface ...
