~~Semiconductors

Semiconductor  
Devices and  
Circuits,  
Applications. The  
Semiconductor  
device is made up  
of a material that is

neither a good  
conductor nor a  
good insulator, it is  
called a

semiconductor.

Such devices have  
established wide  
applications  
because of their  
reliability,  
compactness, and  
low cost. These are  
discrete  
components which

are used in power devices, compactness optical sensors, and light emitters, including solid-state lasers.
